\* This stat is the shooter's average based on the number of targets for the events the shooter has attended.

\*\* This stat is not entirely accurate. I do not have the ability to know which station each shooter started on. Without that information there is no way to determine precisely how many stations were ran consecutively. That said, this stat is tracked as if everybody started on Station 1 at each shoot. It will continue to accumulate from one shoot to another. For example, if a shooter ran the last two stations on shoot #1 and the first two stations on shoot #2 then dropped a target on shoot #2 station #3 this would count as four consecutively ran stations.

# 2024-2025 CanAm

How would you determine which station was the "Hardest" at a shoot? I guess it would be easy to just look at the station average. Is that really the way? What about how many times people ran a station? I think it's a combination of both the lowest station average and the number of times the was station ran. For example, if the lowest station average was a .532, and the number of people who ran the station was, 17 the station rating would be 17.532. If the next lowest station average .562 and only 1 person that station, the station rating would be 1.562. To me that would be the "Hardest" station at that shoot. If you disagree, I'll ask again, how would you determine which station was the "Hardest" at a given shoot?

Shoot #1	FSQ

# 2024-2025 CanAm

Just as Bob Sivell has done in the past, the shoot rating from hardest to easiest is determined by the average score of the top 20 shooters at each event. Also, as previously stated in this report the Station Rating is a combination of how many times a station was ran plus the average number of hits on the station at the given shoot.

## How the Station Rate is determined

#of times ran	1.000
Station Avg	+ 0.562
Station Rating	1.562

Four Square

## CanAm League Stations Rated Hardest to Easiest

1	FSQ	Sta. 12	2.583
